

# IDA – Marketplace for Failed / Abandoned Startups

- Reviving Innovation from the Ashes of Failure
- Data-Driven Investor Pitch Deck

# Market Problem & Opportunity

- 90% of startups fail globally → massive wasted assets (IP, code, branding, domains)
- Asia & India produce high startup volume → equally high failure rate
- 918 startup acquisitions in H1 2025 → over \$100B in deal value
- Market demand rising for micro-acquisitions + distressed asset revivals

# What is IDA?

- A marketplace solely for failed, idle, or abandoned startups
- Founders list MVPs, codebases, domains, userbases, branding assets
- Buyers can acquire OR partner to revive the startup
- Unique dual-mode: sale + collaboration

# Geographic Focus

- Global first, with deep focus on India, China, SE Asia
- Large supply of failed/paused startups in emerging markets
- Competitors under-serve these regions → strong opportunity
- Cross-border deal support integrated

# Competitor: Flippa

- 3M+ users, 40k+ lifetime deals
- Focus on profitable online businesses (apps, SaaS, sites)
- Listing fee + 5–15% commission
- Does NOT target failed startups or partnerships

# Competitor: Empire Flippers

- \$200M+ total sales, highly curated listings
- Requires strong revenue/metrics → excludes early-stage failures
- 15% commission + listing vetting
- No failed-startup acquisition focus

# Competitor: Acquire.com

- 2,200+ active listings, 500+ deals, \$500M+ value
- Focus on healthy early-stage SaaS / eCom
- No support for abandoned or dormant startups
- No partnership or co-founder matching

# Niche Platforms (SleepyStartup, DoneDeals)

- Small niche players with low buyer volume
- Lack verification, legal tools, or global traction
- None offer partnership conversion
- IDA offers complete end-to-end infrastructure

# IDA Differentiation

- ONLY platform dedicated to failed / abandoned ventures
- Supports incomplete MVPs and semi-built assets
- Partnership mode for co-founder or JV revival
- Legal templates, escrow, and verification built-in
- Deep focus on emerging markets

# Validating Partnership Mode

- Many founders don't want to shut down fully  
→ want collaborators
- Partnership increases the chances of revival  
vs. pure sale
- Unique innovation not found in  
Flippa/Empire/Acquire
- Unlocks new category: startup recycling + co-  
building

# Monetization Strategy

- Listing fee (~\$50) ensures quality submissions
- Success commission (~10%) on deals
- Escrow, verification, and due-diligence paid services
- Premium matchmaking & featured listings
- Partnership-deal facilitation fee

# Go-To-Market Strategy

- Supply: Indie Hackers, failed founder communities, GitHub abandoned projects
- Demand: startup studios, accelerators, dev shops, corporate innovators
- SEO, founder newsletters, revival-case-studies
- Localization for India/China by Q2 2026

# Financial Potential

- Flippa → 12,000+ yearly deals → strong comps
- Acquire → 500+ deals/year → shows demand for small startup exits
- IDA profitable with ~400–600 annual transactions
- Massive untapped inventory of abandoned startups globally

# Conclusion

- Huge market: millions of failed startups, zero global recycler
- IDA = first mover advantage + high scalability
- Dual model (sale + partnership) = unique competitive edge
- Lean MVP → fast deployment → big future upside
- Be the world's #1 Startup Recycling Marketplace

will a person from india partner  
with the person in us based on  
joint venture from ida? no fluff be  
real

ChatGPT said:

Short answer:

Yes, it can happen — but it won't  
be common unless you engineer  
the platform to make cross-

how to restrict a situation in ide. or  
how do our competitor solve it?  
the thing is : if the buyer likes  
the idea,/failed startup and want  
to buy or partner . if they get  
connection with each other ,  
they will make deal outside our  
platform and we don't get any  
revenue(transaction

Today  
is escrow in nepal

Absolutely — yes, escrow exists in Nepal, and it's becoming more common. But the landscape is a bit different from countries like the US. Here's the clear breakdown so you know exactly what's available and what isn't.

why will buyer buys or partner without knowing each other. big question. how can they trust to pay the bills. the problem the mvp, codes files are allso with the seeler locally , they can share it privately (no watermarked of our platforma dn how can we track). in dataroom document viewing time, buyer can't screenshot but clik pic of it know? how is dataroom secure ?how it preveent theft? “If a deal happens with someone you met on IDA, you must pay X% success fee.” how do we know does they close deal privately or not?they don'tlet usknow kknow? soln?

Thought for 12s

Short answer up front: You can't stop theft or private deals 100% — especially if people meet offline or use cameras — but you can make it legally risky, technically traceable, operationally hard, and economically unattractive. Do all of the things below together and leakage will be tiny; do any one of them and you'll bleed money.

I'll be blunt and practical: here's exactly how to reduce leakage and theft, why each thing matters, what it stops (and what it doesn't), and how competitors solve it.

1) Preventive product & transaction design (most important)

These are the product rules that make off-platform deals hard or pointless.

Pay/LOI before deep access

Require a non-refundable deposit or LOI before giving access to sensitive assets (code, full decks, user lists).

Why: buyers who paid are far less likely to steal; deposit = economic disincentive.

Staged access + milestones

Reveal in phases: public listing → anonymized preview → limited VDR access after LOI/escrow → full transfer after escrow release.

Why: minimizes what a buyer can take without commitment.

No contact until commitment

Block emails/phones/links until LOI + deposit or signed NDA.

Why: stops sellers and buyers from switching to private channels early.

Platform-controlled transfer for code/assets

Require sellers to upload code/assets to a platform-managed escrow repo (temp private GitHub org, SFTP, cloud storage under your control) before the buyer gets full access.

Why: if the assets live on your controlled repo, sellers cannot privately “hand them out” without leaving a trace.

Escrow for money AND assets

Use a trusted escrow: buyer funds held, seller places assets in escrow repo, platform verifies, then release on
